Profession:

Interface-Designer

The brain behind the looks

Skills & Abilities:

- Creativity
- Affinity for technology
- Experience with the common graphic design programs
- Ability to work in a team

Educational Prerequisites:

To be an Interface-Designer, your studies should focus on the human-machine interaction, communication or media design. The latter normally goes for a time frame of 8 semesters or so.

Job Details:

As an interface designer, you decide how the product – the app – looks and feels for customers. You design the user interface of the product so that it is optimally adapted to the needs, abilities and skills of users. It's also important for the interface designer to make sure the application never looks outdated, which is why you need to stay with a project, as it remains ongoing. Focusing on design, trends, techniques, and tools as they concern the product.

Future Opportunities:

For an entry-level summary, you can count on 30.000 euros a year. With increasing experience and responsibility your salary can rise to over 60.000 euros a year. This career also offers opportunities for promotions. A typical promotion would be to a creative or art director (CD/AD), where you could earn roughly twice as much. It can generally be said that as a good Interface-Designer with the appropriate qualifications, your job search will never be a long one. An increasing number of corporations are putting a greater value on their internet presence. This includes mobile websites and applications and their appearance, which you would be responsible for as an Interface-Designer.
